Chapter – 5

Boom Barriers

1. **Introduction:** To ensure the security and safety of the humane and physical resources of the university, it was essential to control the entry/exit of persons and vehicles in the campus. Such entry/exit is normally regulated by issuing Identity Cards and Gate Passes. All such record is maintained online or in Registers. Keeping in view the large number of vehicles daily coming in and going out of campus, there was a need to introduce a user friendly and automated system to regulate their entry/exit. For this purpose electronically operated Boom Barriers has been installed one at each lane at Main Gate -1A. Operation of these Boom Barriers is controlled by Radio Frequency Identification Device (RFID). The movement of vehicles crossing Boom Barriers is recorded with the help of CCTV Cameras. These Boom Barriers help in generating following reports :

1.1 Date and time of entry/exit of a vehicle

1.2 Frequency of an exit/entry of a vehicle

1.3 No. of vehicles crossing in or out through the Boom Barriers.

2. **Radio Frequency Identification Device (RFID):** This is a device that can be used to operate Boom Barriers to regulate the entry/exit of two/four wheelers. Following persons are entitled to use RFID for automatic entry/exit of their vehicles:

2.1 Employees of LPU coming to University on Two/Four Wheelers

2.2 Regular Students (Hostlers & Day Boarders) of LPU coming to University on Two/Four Wheelers

2.3 Registered Contractors/Vendors of LPU coming to University on Two/Four Wheelers

3. **Procedure to issue RFID:**

3.1 RFID will be issued to any of the above said persons, if he has applied online through the following pathway –

UMS Navigation >>Administrative Task>>Security>>RFID ONLINE Application Form along with scanned copies of the following documents:

3.1.1 A passport size photograph

3.1.2 Photocopy of the Driving License

3.1.3 Photocopy of the Registration of Four/Two Wheeler

3.1.4 Photocopy of Vehicle Insurance

3.1.5 Fee Receipt, if applicable

3.2 RFID will be issued can be received from the office of Division of Security & Safety (Room No. 307, Block 29)

4. **RFID Charges:** Fee to issue RFID will be charged at the rates prescribed by the competent authority from time to time. The existing rates are as per **Appendix – 5.1** on page 36.

5. As no Boom Barriers has been installed at Western Gate, therefore, student allowed to avail Parking facility at Parking – 10 (Outside Western Gate) , will have to apply for Student Parking Pass from the Security Office Block – 2, Room No 204. Block - 27 The Parking charges will be same as mentioned in Appendix -5.1 on page 36.

6. Entry of vehicles through Boom Barriers: Specially programmed RFID Card reader has been installed on every Boom Barrier to regulate the Entry/Exit of vehicles in university campus. This Card Reader is synchronized with RFID. Therefore, for easy entrance RFID should be properly displayed on the authorized vehicle as follows:

6.1 Four Wheelers: RFID will be pasted inside the windshield of the vehicle as shown in the Appendix – 5.2 on page 37.

6.2 Two Wheeler: RFID will be displayed round the neck of the driver as shown in the Appendix – 5.2 on page 37.

7. Visitor Record on failure of Boom Barriers: All the vehicles entering/exiting through Main Gate A-1 will pass through Electronically Operated Boom Barriers controlled by a specific software.

7.1 Boom Barrier will automatically give way to the vehicles having properly installed RFID

7.2 In case of wrong installation of RFID or vehicles of Visitor Pass Holders, the Boom Barriers can be opened by the Security Staff using his own Boom Barrier Card after checking their authenticity of the Visitor Pass or RFID.

7.3 In case of failure of Boom Barriers due to some technical fault of any other reason, the visitor record is kept manually in a register by the Security Staff. This record will have similar information about the visitor, as is being mentioned in Visitor Pass. Later on this information is uploaded online.

7.4 Thus the Report regarding entry/exit of all the vehicles passing through Boom Barriers will be generated with the help of this software.

8. Division of IT Infrastructure will be responsible for installation , activation, deactivation , repair and maintenance of Boom Barriers , RFID Card readers and CCTV Cameras.
